

Processing seedling images for machine learning

By Michael Wojahn and Sven Buerki

1. Download image from GoogleDrive
2. Open image in Preview
3. Drag mouse pointer to select rectangular area that encloses as much of the seedling as possible while excluding post-it notes and rulers
4. Press ⌘K to crop
5. Press alt⌘C to open color preferences tool
6. Press “auto levels”
7. Save image and add “_crop” to end of filename (but before extension)
8. Reupload cropped image to a new folder on GoogleDrive
